DESIGN - MANUFACTURE - INSTALLATION

Gaffco Ballistics, LLC has been protecting companies, private citizens, and government personnel through the design, manufacture and installation of safe rooms, bullet-resistant systems and ballistic security for over 30 years. We deliver products of the highest quality to help ensure the safety, security, and protection of clients, their families, employees and property.

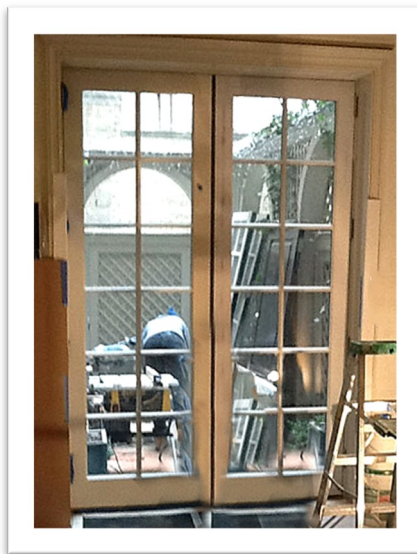

Gaffco Ballistics can advise, design and specify best practices to provide a high level of protection and security for residential individuals, their families and guests. We work directly with our clients' architects and general contractors to replicate their sophisticated design while providing secure areas within their private residences.

Our systems are engineered to mitigate the highest threat levels and designed to blend seamlessly into the surrounding architecture through implementation of quality materials including high-end wood veneers, stainless steel and powder-coated finishes. Our high-security locking and hardware systems are designed to offer the maximum protection levels available and are concealed within the particular assembly to enhance the aesthetics of the finished product without compromising security.

In our years of experience in this niche industry, we have developed some proprietary products and have selected only the best manufacturers that build bullet resistant products to our specifications, using our designs, recommended processes and only materials that have passed ballistics rated tests.

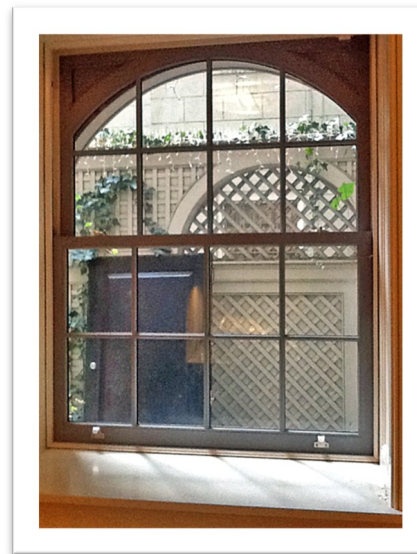

CUSTOM WINDOWS

Our windows are custom engineered to mitigate the highest threat levels, and are built to blend seamlessly into the surrounding décor, matching the architectural design. We use only the highest quality materials. Our windows are constructed with “low iron” ballistic glazing, which is virtually impossible to discern from traditional glazing.
