

CUSTOM BALLISTICS ELEVATIONS

DESIGN - MANUFACTURE

Gaffco Ballistics entry elevations are custom engineered and manufactured to specifications that match existing finishes, style and profile.

Electronic and manual high security locking systems are incorporated into each design.

Current hardware is replicated while existing access control systems are incorporated into the finished installation by Gaffco personnel resulting in a turnkey solution.

Standard finishes: wood, metal and aluminum.
Custom finishes available upon request.

Available in UL Level 3 (.44 mag) up to UL 8 (7.62 mm)
- US State Dept. Forced-entry Certified

"LOW IRON" BALLISTIC GLAZING:

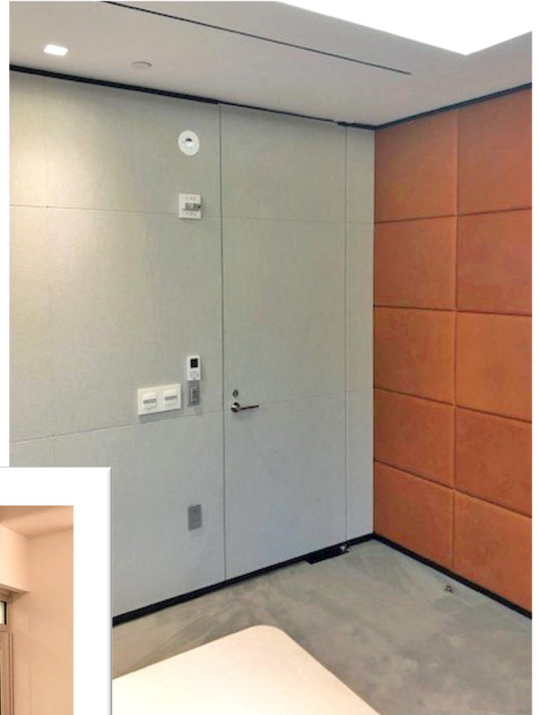

Our ballistic glazing is manufactured using "low iron" components making it virtually impossible to discern the difference between our ballistic glass and traditional glazing.

GAFFCO[®] BALLISTICS

BALLISTIC & ATTACK RESISTANT SYSTEMS

Doors are seamlessly integrated into our wood-clad ballistic panels to create an aesthetic finish while maintaining the ballistic integrity of the entire elevation.

Existing areas such as bathrooms, copy rooms, and pantries can function as dual-use panic rooms with the addition of ballistic-forced-entry resistant doors.

Customized to blend with existing finishes, the doors can be manufactured and installed to suit existing openings, and can be furnished as hinged or sliding doors.

Installation can be performed on an overtime basis limiting interruption to office work.

Existing common areas can be fortified by combining our ballistic entry doors with our wood-clad ballistic wall panels.

Style and finishes are manufactured to match existing areas.

Gaffco Ballistics has been protecting companies, private citizens and government personnel through the design, manufacture and installation of bullet-resistant systems for over 30 years.

We deliver products of the highest quality to help ensure the safety and security of clients, their families, employees and property.

Gaffco Ballistics can advise, design and specify best practices to provide a high level of protection and security for corporate clients, government agencies and high net worth individuals. We work directly with architects, security consultants and general contractors to replicate their design intent while providing secure areas and a safe refuge for clients and employees.

In our years of experience in this niche industry, we have developed proprietary products. We select the best manufacturers who build to our specifications using our designs, recommended processes and only materials that have passed independent ballistics testing.

Full-light, wood clad , ballistic entry elevation.

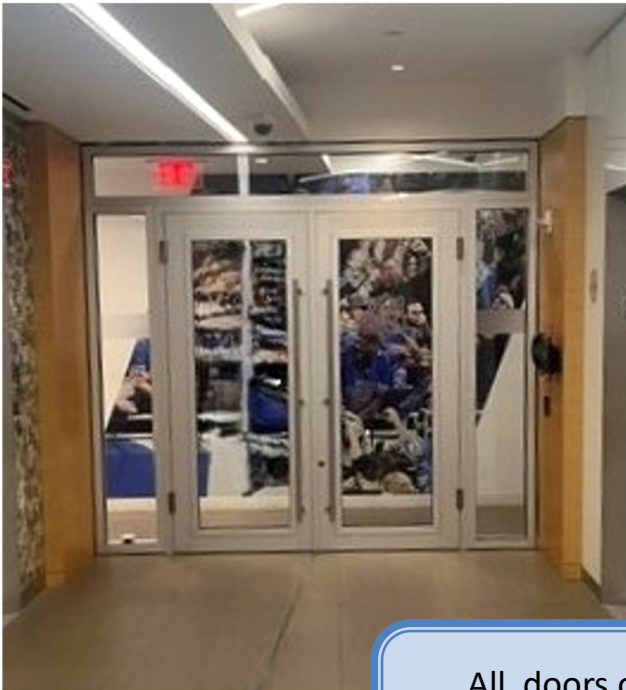

Ballistic elevation with frosted glass inlay.

Ballistic, forced entry resistant door,
incorporating automated door closure.

Ballistic door with seamless
integration into existing millwork.

All doors on this page are
UL3 thru UL7 State Dept. Certified
Forced-Entry, Bullet-Resistant.
